

Dear Sir / Madam

Greetings to you from InCableNet Cable service.

We are the pioneering Multi System Operator for Cable TV to Indian homes, presently providing cable services in over 34 cities covering 9 States. You have been our valued customer and availing our services for many years now and it makes us happy and proud to be associated with you.

We have over the years strived in every possible manner to bring you the latest in channels, quality of signals, consistency in service and best value for money. Our distributors and associate cable operators have worked tirelessly and kept the service available to you in rain or shine, flood or riot.....

Digital signals are already active on the InCable network in each and every apartment of your society. Accessing the digital signals require a Digital Receiver(Set Top Box - STB) which we have made available for each apartment. These STBs are enabled by the latest Nagravision Swiss Technology and are the next generation Digital Receivers. As per government's direction very soon your cable will carry only digital signals and you need to get this STB from your local cable operator at the earliest.

InDigital STB enabled with Nagravision Swiss Technology provides you with 300+ Channels, High Quality Digital transmission, Stereo Sound, Choice of regional and international channels and can be upgraded to 1000 channels. HD Channels are also available on the InDigital HD STBs. Digital cable signals are not affected by any terrestrial interference like Radar, Police Wireless, etc or natural phenomenon like 'solar outage' which disrupt the reception on DTH every year. These interferences have no effect on digital cable. Also, rainfall on dishes that disrupt Ku band DTH have no adverse effect on Digital Cable at all.

Please do not pay heed to misleading advertisements and communication by some of the DTH operators who in their quest to garner market share have been doing so. It is a known fact that world over Digital cable is the latest and superior technology and we therefore have allowed our viewers and products to speak for themselves and not resort to expensive ad campaigns.

Our teams are available for co-ordination of STB installation and shall be deputed to you at earliest possible. For more easy installation you may contact your local cable network operator who is our representative and avail his services in getting this completed smoothly.

**Talk to us today!!..... Get your InDigital STB!!..... Live Life InDigital!!!**
